

Lidl Regional Distribution Centre

DISTRIBUTION & LOGISTICS | INTEGRATED SITE SECURITY

Lidl regional distribution centre.

Security that keeps operations moving.

A busy distribution centre depends on the controlled movement of people, vehicles and goods. Servis brings together access control, onsite monitoring, first response and traffic management in a security model built around Lidl's operation.

01

Control access

A visible gate-hut presence manages entry, checks identification and verifies employees, visitors and contractors to help prevent unauthorised access.

02

Monitor and respond

An onsite control room monitors CCTV, alarms and hazards. Dedicated first-response support helps coordinate action when incidents occur.

03

Keep the site moving

Traffic management and route coordination support vehicle and pedestrian movement, helping security work alongside day-to-day distribution activity.

THE PRIORITY

Protect the RDC while supporting the continuous movement of goods.

LIDL REGIONAL DISTRIBUTION CENTRE

One coordinated security operation.

Servis works as an extension of the client's operational team, connecting activity at the gate with control-room oversight, site response and traffic coordination.

Servis personnel at the Lidl site, supporting security and daily operations.

Traffic management and ANPR

Structured traffic routes and proactive planning help coordinate deliveries, contractors, employees and vehicles. Automatic Number Plate Recognition (ANPR) supports vehicle identification and tracking, complementing the work of onsite personnel.

Monitoring and first response

Centralised CCTV and alarm monitoring supports the identification of hazards and incidents. A dedicated first-response capability provides frontline support for security and fire-related incidents, helping protect people, property and operational continuity.

THE CLIENT'S PERSPECTIVE

“Servis’s ability to tailor security measures to suit each of our site's unique requirements within a restricted timeframe has been a great asset.”
